

Team Name

Project Name

Case Study Category

*(1 - AI-Driven IT incident Prediction & Financial Risk Detection/
2 – Smart Subscription & Customer Experience Optimisation/
3 – AI Governance & Responsible AI in Enterprise)*

Member 1 name, Member 2 name, Member 3 name, Member 4 name

1. Introduction

The introduction should provide a brief overview of the project idea. Participants should explain:

- What their project is about.
- Any background information or context needed to understand the problem.
- What are the project features.
- A short summary of the key technologies they plan to use.

2. Problem Statement

In this section, participants should clearly define the problem their project aims to solve. They should:

- Identify the problem.
- Explain why it is important and who is affected by it.
- Provide supporting data, if available, to justify the existence of the problem.

3. Aim and Objectives

This section outlines the main goal (aim) of the project and the specific steps (objectives) to achieve it.

- **Aim:** A high-level statement describing the project's purpose.
- **Objectives:** A list of measurable goals or steps required to complete the project,

4. Methodology

This section describes how the project will be developed. It includes:

4.1 Implementation

Participants should outline the major stages of development, such as:

- **Prototype Development:** Creating an initial version of the solution.
- **Implementation:** Coding and integrating various components.
- **Testing & Refinement:** Debugging, user testing, and improving the system.

4.2 Tech Stack

A list of programming languages, frameworks, and tools they will use, such as:

- **Frontend:** React, Vue.js, Flutter
- **Backend:** Node.js, Django, Firebase
- **Database:** MongoDB, PostgreSQL, Firebase Firestore
- **AI/ML (if applicable):** TensorFlow, OpenCV, GPT-based APIs
- **Deployment:** AWS, Heroku, Vercel

5. Potential Impact

This section explains the real-world significance of the project. It includes:

5.1 Market Research

- Who are the competitors?
- What are the existing solutions?
- What makes this project unique compared to others?

5.2 Target Users

- Who will benefit from this solution?
- How will they use it?

6. Prototype Interface (Appendix)

Participants should provide wireframes, mockups, or screenshots of their planned interface. This helps visualize the user experience and design.

- UI/UX wireframes (e.g., Figma, Adobe XD)
- Sketches of key app screens (e.g., login, dashboard, main features)

7. References

Any sources, research papers, or articles used to support the proposal should be cited here.

- Academic papers
- Market research reports
- Technology documentation

Reminder: The proposal should not exceed 10 pages, excluding appendices.
